

AI Creative Engine

A scalable, brand-safe creative production model for product key visuals
at the speed of modern media.

Brands need more relevant creatives. You need a smarter way to produce them.

Today's media plans are highly personalized, by audience, product, channel and moment. But creative production is still mostly manual, slow and expensive.

Fullsix AI Creative Engine is built to close that gap: a controlled production model that turns brand rules, product inputs and campaign logic into approved key visuals, faster and at scale.

49%

of ad sales impact comes from creative

Kantar & WARC joint research, 2023

71%

of consumers expect personalised experiences

McKinsey, "Next in Personalization"

4×

more profit from highly creative ads

Google citing NCS, "Five Keys to Advertising Excellence"

Not an image generator. A managed production system.

We combine AI generation, creative direction, brand rules and human QA into a repeatable, scalable workflow that delivers approved key visuals, not just raw AI output.

01	02	03	04
Brand & product rules	AI-assisted creation	Human creative direction	Format adaptation
Your brand, products and constraints are built into the system from day one.	Product images and briefs become contextual visual routes and approved key visuals.	Fullsix selects, refines and validates every output. AI accelerates; humans protect quality.	Approved KVs can be scaled into static, animated, HTML5 or platform formats.

How it works.

01 Inputs Product images, brand guidelines, campaign objectives and audience logic.	02 System Setup Prompt architecture, brand constraints and quality rules are configured.	03 AI Production Multiple controlled visual candidates are generated at scale.
04 Human QA Fullsix reviews for quality, brand fit and accuracy. Manual amendments applied.	05 Delivery Approved KVs delivered. Optional format adaptation across all channels.	06 Learning Loop Performance feedback improves the next batch. The system gets smarter.

Choose the model that fits your needs.

BEST TO START

Sprint

TEST THE MODEL

One brand or campaign. Fixed project fee including setup and a first controlled batch of approved KVs.

From €9,500

MOST POPULAR

Visual Bank

BUILD A LIBRARY

A bank of product-in-context visuals for campaigns, e-commerce, CRM or social. Priced by approved KV volume.

50 KVs from €12,500
100 KVs from €22,500

BEST VALUE AT SCALE

Always-On Engine

ONGOING PRODUCTION

For brands with recurring creative needs. Setup + monthly operation + included volume + extra per approved KV.

Setup from €7,500
+ Price Per Asset (PPA)

Always-On Engine

The pricing detail on the following slides applies exclusively to the Always-On Engine model.

- ↳ Sprint and Visual Bank are priced as fixed-fee projects.
- ↳ The Always-On Engine has four cost components: KV creation, volume bands, setup, and format adaptation.
- ↳ All prices are indicative and ex. VAT. Final pricing is agreed at scoping.

You pay per approved, usable visual (Price Per Asset = PPA), not per AI generation or internal test. The price driver is the level of manual design work needed after AI output.

MINIMAL

Stable templates, simple product contexts. Light cleanup + brand QA + export.

From €95

Range: €79 – €05

STANDARD

Most product-in-context KVs. Retouching, corrections, composition + QA.

From €126

Range: €105 – €140

COMPLEX

Multiple iterations, advanced retouching, product reconstruction, senior design review.

From €189

Range: €158 – €210

The more you produce, the lower the per-visual cost. Volumes are counted across the monthly cycle.

MONTHLY VOLUME BAND	MINIMAL	STANDARD	COMPLEX
0 – 25 KVs	€105	€140	€210
25 – 50 KVs	€100	€133	€200
50 – 100 KVs	€95	€126	€189
100 – 200 KVs	€89	€119	€179
200 – 400 KVs	€84	€112	€168
400+ KVs	€79	€105	€158

Example 120 Standard KVs/month = €119 per KV · Monthly cost: €14,280 ex. VAT · All prices indicative

STANDARD SETUP

€7,500

Brand & context ingestion, product rules, visual references, prompt architecture, QA framework and workflow design.

ADVANCED SETUP

€15,000 – €35,000*

Multiple product families, stricter legal rules, complex visual systems, more templates or integrations.

💡 HOW SETUP DEFINES YOUR ONGOING PRICE

The setup phase is not only a technical onboarding, but also the calibration that determines how much human intervention each campaign will require. Once the first production batch is completed, we will have real data on the actual amendment rate for your brand and products.

This allows us to agree a definitive tier together: for example, moving from Standard (15–40% manual work) to Minimal (0–15%) if the system proves highly autonomous for your use case, and adjusting the per-KV price accordingly.

Once a KV is approved, it can be scaled into any channel format. Priced per final adapted format.

FOUNDATION Template Setup Design and build of a reusable format template per channel spec. Used as the base for all subsequent adaptations. €500 per template	STANDARD Static with layout adjustment Format-specific layout tweaks, message and copy adjustment per spec. €30 per format	MOTION Animated adaptation Motion/animation adaptation based on the approved KV. Includes QA. €150 per format	INTERACTIVE HTML5 / Rich Media HTML5 or rich media adaptation, full QA and delivery packaging. €250 per format

Part of a batch of 600 images created from 25 reference product shots.

Part of a batch of 600 images created from 25 reference product shots.

We adapt a template to multiple formats depending on the channel, and modify a single element if needed, automatically applying the change across all the versions.

Powered by **Vermeer**, the sovereign AI platform built for agency scale.

Fullsix AI Product Visuals runs inside Vermeer.ai, Havas Group's proprietary AI creative infrastructure. This is not a third-party SaaS tool. It is a sovereign, governed platform designed to give advertisers the full power of AI with no compromise on security, traceability or brand safety.

LEGAL & SECURITY

15+ validated AI models. GDPR-compliant. EU-hosted. Client brand assets never exposed to external platforms.

CREATIVE CONTROL

Bespoke workflows and dedicated pipelines. Full creative chain from brief to delivery, built for production.

COST CONTROL

Centralised volume negotiation with model providers. Stable, cost-efficient inference capacity. No dependency on fragmented SaaS.

CREDIT CONTROL

Credits allocated per project, not per user. Every euro invested in AI is traceable, attributable to a client and billable.

What Vermeer guarantees.

IP - SAFE AI MODELS

Only models with full IP indemnification or validated legal status are used.
Your output is yours.

EU - HOSTED & GDPR - COMPLIANT

The majority of models run within the European Union. Client data stays inside the group's sovereign perimeter.

BRAND PERIMETER ENFORCEMENT

Brand rules, product constraints and visual guidelines are encoded at the system level instead of prompt-by-prompt discipline.

FULL TRACEABILITY

Every asset is traceable: which model, which prompt, which version. Audit-ready at any time.

WHAT THIS MEANS FOR YOUR BRAND

- You can approve and sign off AI-produced visuals with confidence. They've passed both technical and brand-rule checks.
- No creative risk from uncontrolled AI output appearing in-market. Every asset has been through Fullsix human review before delivery.
- Your brand assets and strategic briefs are never shared with third-party AI tools or used to train external models.
- Compliance documentation available for legal and procurement review upon request.

What's included.

✓ INCLUDED

- ✓ Production workflow setup, prompt logic and QA rules
- ✓ AI-assisted KV generation and selection
- ✓ Manual amendments per agreed tier
- ✓ Product and brand-safety review
- ✓ Delivery of final approved assets in agreed specs

✗ NOT INCLUDED (UNLESS SCOPED)

- ✗ Original brand strategy or full campaign platform
- ✗ Photography, physical production or bespoke illustration
- ✗ Unlimited revisions or complete creative changes after approval
- ✗ Legal/regulatory approval on behalf of client
- ✗ Paid media trafficking or CRM deployment (unless added)

Human oversight at every step.

01 Brand Safety Every asset is produced within predefined brand, product, claims and visual rules.	02 Human-in-the-Loop AI outputs are never delivered without Fullsix review and approval preparation.	03 Product Accuracy Products are checked for visual fidelity, recognisability and context suitability.	04 Revision Control Revision rounds and amendment levels are agreed upfront. There are no surprises.	05 Learning Loop Each batch gets smarter. Feedback refines future production for better results.

– A CONVERSATION, TO BEGIN

Shall we start the engine?

01 – SCOPE A SPRINT

One brand. One controlled batch. Fixed fee.

02 – CALIBRATE THE ENGINE

Setup defines your ongoing per-KV price.

03 – MOVE TO ALWAYS-ON

Ongoing production, at the tier you've earned.
